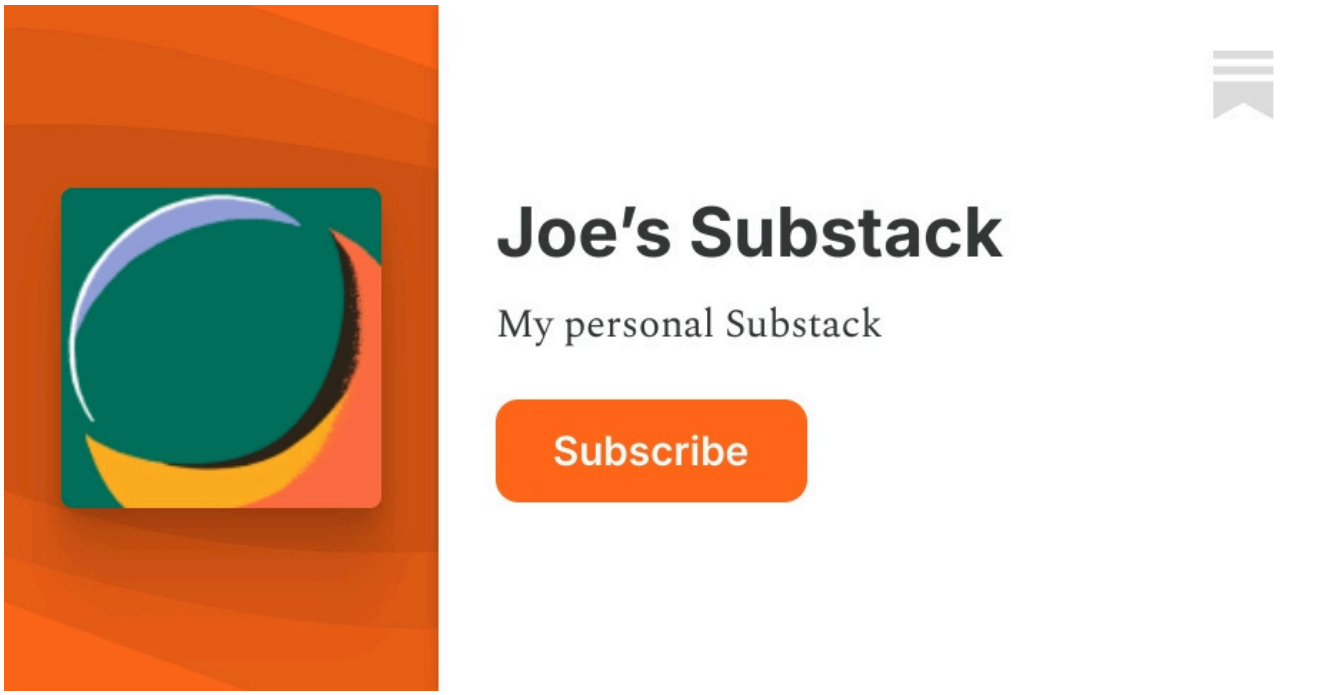
Faculty Advancement in the Age of Generative AI: Aligning Academic Review with the Campus AI Framework

joesabado.substack.com/p/faculty-advancement-in-the-age-of



Practical steps for integrating AI ethics, disclosure, and readiness into faculty promotion and merit review systems.

Joe Sabado
Nov 11, 2025

Introduction

Artificial intelligence is changing how faculty teach, research, and contribute. Generative AI tools such as ChatGPT and Gemini now appear in writing, data analysis, course design, and collaboration. These tools expand options and efficiency. They also raise questions about authorship, integrity, and accountability.

Faculty advancement systems were built before these tools existed. They rely on evidence of human creativity, independent scholarship, and professional ethics. As AI shapes knowledge work, institutions need to keep those values at the center.

The Campus AI Framework (https://campusaiexchange.com/campus-ai-framework) offers a practical path. It supports responsible integration of AI while protecting mission, ethics, and transparency. Applied to advancement, the framework keeps human judgment, creativity, and excellence in focus.

This article first maps the eight Campus AI Framework pillars to faculty advancement. Then it outlines a typical, high-level process with specific documents, the review pipeline, and evaluation criteria. The goal is a system where innovation and integrity work together. Faculty explore new tools while preserving the trust that defines academic life.

Applying the Campus AI Framework to Faculty Advancement

Pillar 1: Campus Mission and Vision

Advancement should affirm alignment between AI use and the institution's purpose and educational values. The aim is human flourishing and knowledge creation, not replacement of intellectual labor.

In practice

- Evaluate whether AI enhances, not substitutes, scholarly contribution.
- Show in narratives and evaluations how AI supports academic excellence, inclusion, and access.

Reflection questions

1. How does AI use in scholarship or teaching advance the mission of ethical innovation and public good?
2. Where does AI demonstrably improve learning, research impact, or service outcomes?
3. What safeguards keep human authorship and judgment visible in the final work?

Pillar 2: AI Principles

Transparency, fairness, and human accountability should guide AI-enabled work and its evaluation.

In practice

- Disclose how AI assisted in research, writing, or teaching materials.
- Apply consistent expectations for authenticity and originality.
- Signal integrity through clear authorship and disclosure.

Reflection questions

1. Which principles govern acceptable AI use across disciplines and review processes?
2. How do faculty and reviewers demonstrate accountability when AI tools are involved?
3. What practices ensure disclosures are clear, accurate, and consistent?

Pillar 3: AI Policies and Guidelines

Policies translate values into clear expectations for disclosure, authorship, and integrity.

In practice

- Require a statement of AI use in research, creative works, and self-assessments.
- Update handbooks and personnel guidelines with allowed and prohibited practices.
- Guide reviewers on evaluating AI-influenced outputs while keeping decisions human-led.

Reflection questions

1. Do current policies give unambiguous direction on AI disclosure and attribution?
2. What examples and templates help faculty apply policy in daily work?
3. How do policies balance responsible innovation with academic standards?

Pillar 4: Governance, Risk, and Compliance

AI introduces risks to authorship, bias, and credibility. Governance protects the process.

In practice

- Establish oversight for AI within academic personnel governance.
- Add AI disclosure checks to dossier systems.
- Include AI-focused questions in integrity reviews and audits.

Reflection questions

1. Which risks are most material in your context, and how are they mitigated?
2. How are disclosures verified at each stage of review?
3. What escalation path exists for unresolved AI ethics concerns?

Pillar 5: AI Engagement and Collaboration

Advancement is developmental. Recognize literacy and community-building work around AI as legitimate contributions.

In practice

- Credit faculty who lead AI ethics workshops, mentorships, or curricular initiatives.
- Support peer dialogue on effective and responsible AI use.
- Count these activities under professional service or innovation.

Reflection questions

1. How are faculty supported to build AI literacy and share practice?
2. Which collaborative efforts measurably improved teaching, research, or service?
3. What recognition signals that ethical AI engagement matters in advancement?

Pillar 6: Campus Readiness

Readiness determines whether AI helps or distracts from advancement.

In practice

- Train faculty and reviewers on AI authorship and disclosure.
- Modernize dossier systems to include AI documentation.
- Build a culture of openness and learning, not fear.

Reflection questions

1. What capabilities and tools are in place for responsible AI use and evaluation?
2. Where do training or infrastructure gaps still exist?
3. How will readiness be assessed and improved over time?

Pillar 7: Roles and Responsibilities

Every participant shares responsibility for ethical AI use.

In practice

- Faculty disclose AI use in research and teaching materials.

- Reviewers avoid generating letters with AI unless disclosed and permitted.
- Academic personnel staff provide templates, training, and oversight.
- Leaders model expectations through policy and example.

Reflection questions

1. What does good disclosure look like for each role in the process?
2. How do reviewers demonstrate independent human judgment?
3. Which supports help leaders reinforce expectations consistently?

Pillar 8: Implementation and Operations

Operationalize ethics in daily workflows.

In practice

- Add an AI Disclosure Statement in dossier submissions.
- Update review templates with AI integrity criteria.
- Recognize new service and innovation tied to AI governance and digital pedagogy.
- Run periodic checks on AI use across cycles and improve policies over time.

Reflection questions

1. Where in the workflow do disclosures and checks occur?
2. How are outcomes tracked to refine policy and practice?
3. Which operational changes reduce friction while improving integrity?

With principles and safeguards in place, institutions need a clear, accessible process showing faculty how responsible AI use fits into advancement. The next section describes a typical, high-level process with documents, checkpoints, and roles that bring the framework to life.

The Faculty Advancement Process in Context

This section describes a typical, high-level process used across many institutions. Local details vary. The structure below reflects common practice and supports fairness, consistency, and shared governance.

Core Areas of Evaluation

1. Research and Creative Work. Publications, scholarly articles, performances, exhibitions, or professional innovations showing originality and impact.
2. Teaching and Mentoring. Course evaluations, peer observations, syllabi, mentoring records, and evidence of student learning.
3. Professional Competence and Activity. Leadership in professional organizations, editorial boards, conference presentations, and disciplinary contributions.
4. University and Public Service. Committee work, community engagement, and contributions to institutional initiatives.

Advancement decisions reflect cumulative excellence across these areas.

Required Documentation

Faculty prepare a dossier demonstrating excellence and disclosing AI use where relevant. Typical items include

- Departmental Evaluation Letter. Analytical summary of contributions, the departmental vote, and justification for the recommendation.
- Curriculum Vitae or Bio-Bibliography. Full record of research, teaching, and service, including publications, grants, awards, and presentations.
- Teaching Evaluations. Quantitative and qualitative data such as course evaluation reports, student comments, and peer observations.
- External Letters. Confidential assessments from independent experts, often six or more for promotion and higher-level merit actions.
- Personal Statement or Self-Assessment. A four to six page narrative explaining contributions and context across teaching, research, and service. Include any AI assistance to preserve voice and authenticity.
- Service Documentation. Evidence of committee roles, community engagement, policy work, or leadership. Include AI ethics, governance, and literacy efforts.
- Procedural Safeguard or Rights Certification. Signed statement confirming observance of review procedures and access rights.

AI-Specific Disclosure Expectations

Research and Creative Work

Faculty should clearly state if AI generated or substantively edited ideas, text, data, images, or code. All disclosures align with journal or publisher rules and institutional ethics policies. Transparency protects authorship integrity and ensures replicability.

Reflection questions

1. How did AI contribute to the originality or framing of this research or creative work?
2. What steps were taken to verify and disclose AI involvement to maintain academic integrity?
3. Does the use of AI in this context enhance or obscure the faculty member's intellectual contribution?

Methodology

Documentation identifies if AI tools supported data analysis, synthesis, visualization, or model development. When possible, specify the tool, model version, dataset, and parameters to support reproducibility.

Reflection questions

1. How is the AI-assisted methodology consistent with disciplinary and ethical standards for transparency?
2. Could another researcher reproduce these results with the information provided?
3. Were any potential biases or limitations of the AI model acknowledged and mitigated?

Teaching

Faculty state if AI helped create lecture notes, assignments, exams, or rubrics. All materials comply with copyright and institutional policies on originality. Transparency in instructional content reinforces trust and models ethical practice for students.

Reflection questions

1. How was AI used to improve student learning outcomes or instructional design?
2. Were students informed about the role of AI in the materials they used?
3. Does the AI-assisted content align with pedagogical goals and accessibility standards?

Self-Assessment

Faculty disclose if AI was used to draft, edit, or structure personal statements or self-assessments. The aim is to maintain authenticity and voice while allowing responsible, transparent support.

Reflection questions

1. How did AI shape the tone or framing of the self-assessment narrative?
2. Does the statement reflect the faculty member's authentic perspective and professional identity?
3. What are the ethical boundaries of AI assistance in personal reflection or narrative writing?

Review Integrity

Reviewers, committee members, and administrators do not use AI to generate evaluative text, letters, or recommendations without explicit disclosure and approval. Independent human judgment remains essential to preserve fairness and integrity.

Reflection questions

1. How will reviewers ensure that decisions reflect authentic human analysis, not machine synthesis?
2. What disclosure or attestation process will reviewers follow if AI tools are used in limited, clerical ways such as grammar checking?
3. How might reliance on AI risk introducing bias or eroding trust in peer review?

Review Pipeline and Authority

A multi-tier structure reinforces fairness, consistency, and rigor. Each stage plays a distinct role in evaluating performance, verifying documentation, and ensuring ethical integrity, including AI-related disclosures.

1. Departmental Review

Peers evaluate the dossier, deliberate, vote, and draft an analytical recommendation that summarizes achievements across research, teaching, service, and professional activity. Focus rests on discipline-specific expectations, teaching innovation, and alignment with departmental goals.

AI-integrated expectations

- Confirm faculty AI disclosures in research and teaching materials.

- Keep departmental letters grounded in independent human judgment.
- Tie the vote and recommendation to clear evidence of originality and rigor.

Reflection questions

1. How are reviewers assessing responsible AI use in scholarly and instructional work?
2. What safeguards keep human judgment central to peer evaluation?
3. How will the department balance innovation with accountability when AI tools are involved?

2. Dean’s Review

The dean or designee provides administrative verification and endorsement. For standard, non-accelerated merits, this review often serves as final authority. It ensures consistency with divisional priorities, procedural fairness, and policy alignment.

AI-integrated expectations

- Verify that the dossier includes required AI disclosures.
- Confirm that departmental reviews followed ethical and procedural standards.
- Ensure recommendations reflect transparent documentation and fair criteria.

Reflection questions

1. How is the dean’s office building capacity to identify and address ethical AI issues in submissions?
2. What documentation confirms that AI disclosures were reviewed and understood before endorsement?
3. How does this layer reinforce consistency and equity across departments in handling AI use?

3. Peer Committees

Independent and confidential peer committees review cases for promotion, tenure, or above-scale merit actions. They apply scholarly expertise to assess quality, impact, and ethical conduct across the candidate’s full body of work.

AI-integrated expectations

- Evaluate whether AI-related research meets standards for originality and authorship.

- Verify transparency in methodology and acknowledgment of AI-supported outputs.
- Confirm that teaching and service reflect ethical AI engagement and literacy-building.

Reflection questions

1. What guidance ensures committees interpret AI disclosures consistently across disciplines?
2. How do reviewers distinguish ethical augmentation from problematic over-reliance?
3. How do deliberations promote openness and accountability when discussing AI's role?

4. Academic Personnel Committee or Equivalent

This committee conducts a comprehensive review of all prior recommendations and the complete dossier. It ensures adherence to institutional standards and reflects both fairness and excellence.

AI-integrated expectations

- Check alignment between campus AI principles, ethics policies, and individual cases.
- Identify missing disclosures or inconsistencies in AI use or attribution.
- Integrate AI integrity checks into policy compliance and procedural audits.

Reflection questions

1. What mechanisms verify AI-related disclosures at this institutional level?
2. How can the committee establish a shared language for evaluating AI's scholarly and pedagogical impact?
3. What role does this stage play in reinforcing campus-wide norms of transparency and trust?

5. Final Approval

Senior academic leadership provides final sign-off for promotions, high-level merits, and tenure decisions. This step represents oversight and institutional endorsement of integrity and excellence.

AI-integrated expectations

- Validate that each stage applied AI ethics consistently and fairly.

- Ensure AI use aligns with mission and does not compromise standards.
- Recognize AI-related innovation, ethics contributions, and service as leadership.

Reflection questions

1. How does leadership balance institutional reputation with individual innovation in AI-related work?
2. What signals from leadership reinforce a culture of integrity in AI use?
3. How does this final step inform future policy and training on responsible AI integration?

3) Integrating AI Ethics Within Each Evaluation Area

Research and Creative Work

Reviewers assess authorship, originality, and transparency. Faculty disclose where AI generated or edited ideas, text, data, images, code, or visuals. Methods and datasets are documented so results are reproducible.

AI-integrated expectations

- Disclose AI assistance for literature reviews, drafting, coding, data cleaning, figures, and media.
- Provide enough methodological detail to replicate AI-supported steps.
- Confirm originality, proper attribution, copyright compliance, and permissions.

Reflection questions

1. Where did AI materially shape ideas, language, data, or visuals, and how is that disclosed?
2. Is there enough methodological detail for another scholar to reproduce the AI-assisted work?
3. What checks ensured that AI output did not introduce plagiarism, fabrication, or copyright violations?

Teaching and Mentoring

Reviewers look for ethical, effective use of AI in instruction and student support. Faculty set clear expectations for student AI use and model responsible practice.

AI-integrated expectations

- Disclose AI use in syllabi, assignments, exams, rubrics, and feedback tools.
- State student AI rules with examples of allowed and prohibited use.
- Validate accuracy, accessibility, and fairness of AI-assisted content.

Reflection questions

1. How did AI improve learning outcomes, access, or feedback without reducing rigor?
2. Are student guidelines clear, teachable, and aligned with academic integrity policies?
3. What quality checks verified accuracy, bias, accessibility, and data privacy?

Professional Competence and Activity

Reviewers recognize leadership that advances ethical AI in the discipline and the profession.

AI-integrated expectations

- Credit standards work, workshops, panels, guidance documents, and editorial policies on AI.
- Highlight peer education that improves AI literacy and ethics.
- Document impacts, such as adoption by departments, conferences, or journals.

Reflection questions

1. Which contributions raised the field’s capacity for ethical AI use?
2. What outcomes show practice change beyond the home unit?
3. How were equity, bias, privacy, and authorship addressed?

University and Public Service

Reviewers value service that builds responsible AI culture and shared capacity.

AI-integrated expectations

- Recognize policy development, governance roles, training programs, and outreach on AI ethics.
- Credit efforts that improve equitable access to AI resources and support.
- Document results, such as implemented policies, completed trainings, or community partnerships.

Reflection questions

1. How did this service improve readiness, transparency, or trust related to AI?
2. Who benefited, and how were equity and inclusion advanced?
3. What evidence shows durable outcomes, not only activities?

4) Building a Responsible AI Culture in Faculty Evaluation

Integrating AI into advancement is stewardship. Institutions reinforce trust and fairness when they

- Publish clear AI disclosure guidelines for candidates and reviewers.
- Offer training on authorship, data responsibility, and AI literacy.
- Recognize innovation and service related to AI policy, governance, and teaching.
- Add AI integrity statements and checkpoints to dossier systems and templates.
- Create a learning loop to review outcomes and update policies.

Closing Insight

Faculty advancement sits at the heart of academic integrity and shared governance. Alignment with the Campus AI Framework keeps innovation and ethics in balance. AI should make the line between human intellect and machine assistance more visible and accountable. With mission alignment, governance, readiness, and clear roles, institutions honor human creativity while adapting responsibly to new technology.

Note: The perspectives shared are personal and do not reflect official positions of my employer.
