Job Description:
We are seeking a driven and talented Enterprise Infrastructure and Cloud Engineer to join a dynamic team with a wide breadth of technical knowledge as a Systems Engineer III. This individual will bring a passion for technology, a competent virtualization skill set, and an ability to deploy and configure production-ready solutions, services, and tools for our IT workloads using best practices and automation wherever possible. Familiarity with AI-driven automation and serverless architecture is highly desirable, with an emphasis on foundational knowledge and a willingness to learn and grow in these areas. The position plays a pivotal part in the organization's Infrastructure Services, with opportunities to be involved at all stages of projects-governance, development, and operations. The engineer will serve as project manager for enterprise solutions, collaborating with internal and external stakeholders, recommending best-fit solutions, and monitoring emerging technologies.
